* Methicillin-Resistant *Staphylococcus aureus*.

** Methicillin-Susceptible *Staphylococcus aureus*.

^f Daptomycin routinely tested only on isolates from sterile sites.

Shaded boxes indicate organism/antimicrobial combinations not tested routinely or insufficient data available for robust statistical analysis.

Regional antibiogram includes first isolate per patient for inpatients, outpatients, and Emergency Department.

[†] Only indicated for uncomplicated cystitis.

• Because of the presence of inducible beta-lactamase, these organisms should be considered resistant to the antimicrobial indicated.

‡ Intrinsically resistant to nitrofurantoin, tetracyclines, and colistin.

£ Low-level resistance to imipenem is common in Proteaceae; imipenem cannot be inferred from meropenem.

Shaded boxes indicate organism/antimicrobial combinations not tested routinely or insufficient data available for robust statistical analysis.

Regional antibiogram includes first isolate per patient for inpatients, outpatients, and Emergency Department.
